Well - The New York Times

A new study finds that the choice to eat or omit a meal before an early workout could affect our relationship to food for the rest of the day.

What are the Main Symptoms of Asperger's Syndrome in Adults?

Asperger's syndrome is a neurobiological disorder considered to be part of the autism spectrum. The exact cause of the condition is unknown, although many experts believe there is a hereditary component. Asperger's syndrome can affect people of all races and socioeconomic backgrounds, although it is three to four times more common among men.
Autism Partnership

Autism Partnership was formed in 1994 to meet the tremendous need for effective services to families with autistic children. Based upon our founders’ extensive and unique experiences in providing behavioral treatment to children, adolescents and adults we have developed a comprehensive program that provides a variety of services.

First, Discover Their Strengths - Educational Leadership

Despite our best intentions, we've created a system of special education based on deficits. To fashion an environment in which students with special needs can achieve their fullest potential, we need to dig deep into the roots of special education and, at the bedrock level, replace its disability paradigm with a belief system based on diversity. ...
